

Features

Device Features

Power Guard metal detector is a high performance handheld detector produced to meet the needs of the security industry. It is used for body search for security weapons in crowded places, to ensure airport and border security, to search the metal contents of parcels and envelopes coming with cargo, and to detect metal objects that cannot be hidden in any other location but must be exposed.

General Features

When a metal is approached, it warns small metal parts closely, large metal parts (gun, knife, etc.) from further away by giving an alarm and light (red led) warning

High sensitivity and selectivity

Large scanning area

Easy to use

Auto-frequency locking

Advanced technology

Portable and comfortable case

Vibration (standard)

Rechargeable Ni-MH battery (opt.)

Charger (opt.)

Criteria It Meets	National Standard << GB 15210.
Sensitivity	Adjustable sensitivity level
Detection Function	The requirements of various situations 100 degree angle to meet sensitivity
Control	Light and audible warning in low battery
Operating Voltage	9 V BATTERY
Qualification	Distinguishing ferrous metals and other metals
Operating Frequency	22 KHZ
Operating Voltage	-20,+45 degrees
Warning	Sound,Light,Vibrating
Weight	Approx. 409 g
